

Spanish Flashcard program

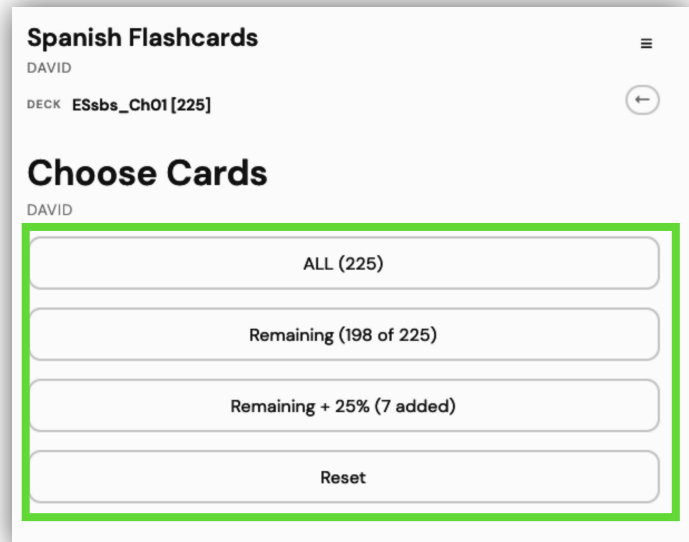

(for David & Miguel)

<http://spanish-flashcards.streamlit.app>

HOW TO USE

- First, choose any deck you wish. $[n]$ = the number of Eng-Spanish (or Spanish-Spanish) pairs.
- If you have already done one or more decks and missed any cards, you will see a special REVIEW deck at the top. Choose this if you want to review/learn all the cards you've missed in any deck.
- After you select a deck to practice, if you decide you want a different deck, click the ← to the right of the deck name.
- If you select any deck *without the word story in the filename*, then after you choose a deck, you will see the following choices (Note: some may be disabled if inapplicable)
 - **ALL** will display every card in the deck, even if you have seen them before. This is a good way to review all the words/sentences again.
 - **Remaining** will display only the cards that you have not yet answered correctly
 - **Remaining + 25%** will add back into your deck a random selection of 25% of the cards you already answered correctly. This is a valuable way to see if you remember some of the previous cards that you answered correctly.
 - **Reset** will set all cards in this deck to unanswered.

- All the filenames have an icon:

- ★ Review deck
- Deck untouched
- Deck in progress
- ✓ Deck completed

OPTIONS MENU

- In the upper-right corner of the file selection page is a tofuburger icon: ☰ which contains the following options you can set:
 - **Hints:** shows or hides optional content (placed in curly braces any where in your .csv)
Example: You play piano. {tocar, sing, inf}
 (meaning use the singular, informal form of you, and a hint which verb to use)

Example: you begin [sing, inf] {e > ie}
 (text in [...] will always be displayed)
 - **Theme Colors:** One of four UI theme colors (*light, dark, aqua, amber*)
 - **Language Direction:** Order in which the EN and ES are presented
(*default is random 50/50 chance*)
 - **Speech Speed:** 5 speeds from Very slow to Very Fast (browser default)
This is how fast the Spanish speaker reads the text.
-

2 settings used only in Story mode:

These affect how long the pause is between story sentences.

The length of this pause is calculated using the number of letters, number of words, your *Reading Speed* and your desired *Pause Amount*. These are independent of the *Speech Speed* (above).

In general, when both of these are set to 5 (slowest & longest), the pause will be long enough for you to say the Spanish sentence once or twice, glance at the translation, and think about the words. Adjust these independently to achieve a pause time that you are usually comfortable with. Change at any time.

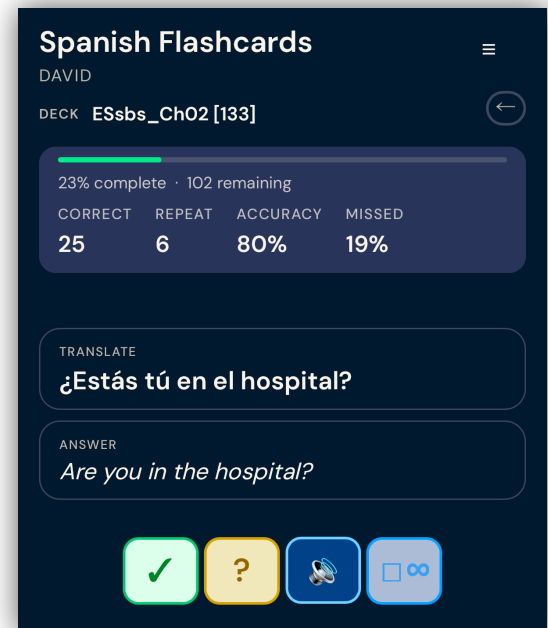

- **Reading Speed:** 5 speeds from Very slow (5) to Very fast (1)
This is how fast, in general, *you* can read Spanish.
 - **Pause Amount:** 5 speeds from Very long (5) to Very short (1)
-

- **Erase Review Deck** (username): press once to activate, press again to confirm
- **X** (*in upper right corner*): Saves your preferences and returns to program.
Be sure to tap this to save your choices!

This program offers 2 modes:

- **Regular mode:**

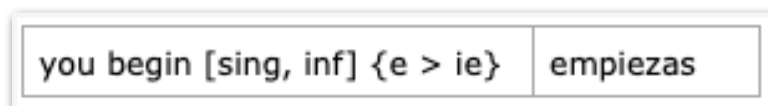

- The order of the cards is always *random*.
 - The program keeps track of which cards you answer correctly, and which ones you miss.
 - When you miss a card, it will be repeated twice – the first time soon after you miss it, and the next time later in the deck. If you miss it again, the repeat count goes back up to 2.
 - Every card you miss is added to a special REVIEW deck (*details below*).
-
- Guess and say the answer, then tap either box (or tap the → box). (*If you don't know the answer, tap the box or arrow anyway.*)
 - Tap ✓ if you got it correct
 - Tap ? if you got it wrong (or didn't know it). If you tap ? the word will be repeated two more times for review.
 - Tap 🎧 to hear the word/phrase (*Note: voice is browser independent – best voice in Safari*)
 - If you want the Spanish to always be spoken automatically, click the ∞ box 
 - Your current stats are printed at the top.
 - After you tap ✓ or ? you will see

At any point, you will can tap → to go to the next word/sentence, or you can tap the 🛑 to end the current session.

A summary will be displayed. You then have 3 choices:

- **Mistakes:** Repeat only the words you missed (if any)
- **New:** Start a new session (pick a different file)
- **Quit:** Stop the program

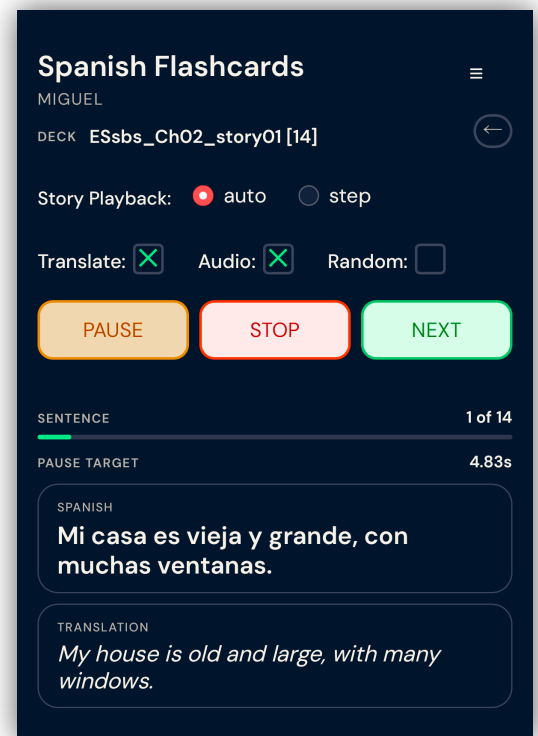

- **Story mode:**

- Any filename that contains *story* (such as myfile03_*story*.csv) will use this mode.
- In the file selection window, story files are marked with 📖
- The order of the cards is *sequential* (with an option for them to be random).
- This mode is useful for listening comprehension and speaking.
- English translation and the audio can be toggled on/off
- **Wait time:** After the Spanish is shown and spoken (if Audio is on), the program will pause to give you time to say the sentence aloud once or twice (see the info above for the options menu). The wait time is displayed as "PAUSE TARGET" in seconds.

Note: any time that you don't want to wait for the pause period to finish (or if you want to skip the sentence), you can tap the **NEXT** button.

- A progress tracker shows how many sentences you have completed in the file.
- The program does *not* keep track of which stories you have finished.
- Normally, after the wait (pause) period, the next sentence is displayed. However, if you wish to manually control the advancement, select *step* for the Story Playback. Then you can press the **NEXT** button whenever you wish to advance to the next line of the story.
- Press **PAUSE** at any point if you need even more time to study or say the sentence.
- Press **STOP** at any point to return to the file selection window.
(or you can press the ← to the right of the filename at the top)
- **Format of a story file**
The format is exactly the same as other files.
English is col 1, Spanish in col 2.
The lines are exactly in order of the story. Be sure to include "story" in the filename.

REVIEW DECK

- Each user (Miguel or David) has a dedicated deck of missed words.
- Every time you tap  the missed word will be repeated two more times for review within the current deck.
- The word will also be written to a special **Review** deck, which will contain missed words from ALL of your sessions, regardless which deck you have been working on.
- If you have a Review deck, it will be shown at the top of the file list. You can choose it any time you wish to review all of the words that are currently "unknown."
- Every card in your Review deck will have an initial repeat value of 5, meaning that it will be shown 5 times at random intervals.
- On the screen with the , , and , you'll see a 4th button – a purple X.
At any time, if you don't want to continue seeing the current word for review, tap the X once. It turns red. Tap again within 2 seconds to confirm.
That word will be deleted from your Review deck.
- At any time, if you wish to erase ALL the words in your Review deck, you can do this in the Options (tofuburger) menu.

FILE FORMAT

- **Important:** I have a python program that will create a 3-column layout from your 2-column layout. Therefore, you do not need to manually create 3 columns or add the id numbers.
- If you are using A.I. to extract the English and Spanish word pairs (or either one of them and having A.I. translate the other one), be sure to tell it that you want the output in "raw, inline, markdown". Follow David's instructions about attaching the .md file for the A.I. bot. Then click the squares icon to copy that text, paste it into TextEdit, and save the file using the extension ".csv" Then double-click on this .csv file, manually add a new line at the top, and name the 2 columns "word" and "answer". Delete all extra columns and rows. Export as .csv and overwrite the previous one. This is the file David needs.
Note: if this is a story file, be sure the word "story" is part of the filename.
- If you are creating a file from scratch, use Numbers. You should have exactly 2 columns with headers "word" and "answer". Column 2 must always be Spanish. Column 1 is usually the English, but can be Spanish (such as a question, a fill-in-the-blank, etc.). Delete any unused rows. Export as .csv. This is the file David needs.
- Put **extra info** the user may *need* inside []. It will be shown.
- Put **hints** inside { } These can be turned off in the tofuburger menu.
(See page 2 above for examples.)
