

Spanish Flashcards - Extracting English-Spanish from a PDF

Suppose you have a PDF of one or more pages (or of entire Spanish chapter) and you want to extract all the vocab and sentences (that have English & Spanish):

1. If you are going to extract a chapter from a PDF book, first make a *copy* of the book.
Name it something like `temp03.pdf` (if you are doing Chapter 3)
2. Open that PDF and delete all pages that are NOT chapter 3. Save it.
3. In ChatGPT, first drop `Spanish-English Vocabulary Extraction.md` that I emailed to you. Do not change it at all.
4. Also drop in your `temp03.pdf` into ChatGPT.
5. Type: *Follow the instructions in "Spanish-English Vocabulary Extraction.md"*
6. It should analyze then print the list of "English";"Spanish"
(if you see anything you want to change, don't do it yet)
7. Click on the little squares icon (usually at the top of its output window) to copy all of it.
8. Open a new document in *TextEdit*. Paste in the data.
9. On the first line (above the existing text), add: **"word" ; "answer"**
10. *Export As* **csv** file, giving it whatever name you want, such as:
`MAC_Int_Sp_Ch01.csv`
11. If you want to look at or change the file, double-click on the `.csv`.
 1. This will open it in Numbers.
 2. Make your edits. *Export As* **csv** again.
 3. Quit Numbers (you don't need to save the Numbers file).
12. Throw away the `temp03.pdf` file.
13. Repeat these steps for each document.
14. Send file to David.
